

AI Metrics and Imaging Biometrics Strike Agreement

Imaging Biometrics to market and distribute AI Metrics' LSN software

AI Metrics, LLC (Birmingham, AL), announced today that it has entered into a global distribution agreement with Imaging Biometrics, LLC, a subsidiary of IQ-AI Limited (LON:IQAI). The agreement grants IB non-exclusive global rights to market and distribute AI Metrics' LSN image analysis product. LSN is a first-to-market platform designed by AI Metrics as a virtual liver biopsy, evaluating liver surface nodularity (LSN) to assess Chronic Liver Disease (CLD) using commonly acquired CT images.

Chronic liver disease (CLD) is a serious condition that includes inflammation, progressive stages of fibrosis, and cirrhosis. Clinically silent, over 20 million deaths worldwide are attributed to CLD with the majority of those resulting from non-alcoholic fatty liver disease. AI Metrics has developed its proprietary LSN Software to non-invasively assess the nodules, or bumps, on the liver's surface. This information, when used by trained clinicians, may aid in the diagnosis and staging of CLD.

For patients, this is great news. Currently, clinicians assess patient liver condition via surgical biopsy, which is prone to sampling error, pain, bleeding, and other complications. In contrast, LSN analysis uses common CT scanning technology and proprietary software for accurate, low risk assessment of CLD. While other non-invasive imaging approaches are available, such as magnetic resonance elastography and ultrasound elastography, both require non-standard imaging technology, and patient fasting beforehand.

AI Metrics enlisted the services of Imaging Biometrics to help complete the translation of the LSN technology to routine clinical use. Along with software development services, IB offered its regulatory expertise and is assisting AI Metrics in seeking CE Mark and FDA 510(k) clearance for marketing in Europe and the U.S., respectively.

"We are excited about partnering with Imaging Biometrics as we introduce LSN technology to the worldwide market," said Dr. Andrew Smith, CEO of AI Metrics. "Their development efforts have been integral to bringing LSN from promising research to commercial introduction, and the continuity of our relationship moving forward will ensure that LSN can quickly gain widespread utilization."

About AI Metrics

AI Metrics is an early stage company creating transformational image analysis technology that positions radiologists to be the most efficient, valuable clinicians in the patient care continuum. Founded by emerging radiology leader Dr. Andrew Smith, the Company is developing AI-driven innovations to enhance workflow speed and reduce costs, while improving data quality for clinical and research efforts, and ultimately, for improved physician collaboration and patient care and communication. For more information about AI Metrics, visit the company's website at www.aimetrics.com.

About Imaging Biometrics

Imaging Biometrics, a subsidiary of IQ-AI Limited (LON:IQAI), develops and provides visualization and analytical solutions that enable clinicians to better diagnose and treat diseases with greater confidence. Through close collaboration with top researchers and clinicians, sophisticated advancements are translated into platform-independent software plug-ins which can extend the base functionality of workstations, imaging systems, PACS, or medical viewers. By design, IB's advanced visualization software seamlessly integrates into routine workflows. For more information about Imaging Biometrics, visit the company's website at www.imagingbiometrics.com.
